TO WHOM IT MAY CONCERN

**T-96 End-of-life Notice**

Unfortunately we have reached a critical time in the lifecycle of the T-96SR product family. As components began going obsolete over the last few years, CalAmp/Dataradio invested heavily in last time buys. However, our inventory of obsolete components has run dry and it is no longer feasible to continue production of this product. Therefore the T96SR family of products is now officially end-of-life and no longer available to purchase.

There is however a migration path from the T-96SR with the fully compatible and now available Guardian serial radio modem.

The Guardian is fully backwards compatible with the T-96SR and has a host of additional benefits and features. Designed for today's higher speed SCADA & Telemetry applications, Guardian provides a transparent 19200 bps digital link in a 25 kHz channel, or a 9600 bps digital link in a 12.5 kHz channel and most protocols. Guardian is available at VHF, UHF, and 900 MHz.

Yours sincerely,

Alexander Crane-Robinson,

Director, International Markets  
CalAmp Corporation
